A progressive approach to managing education

dtems

Dale Technology Educational Management Systems

Increasing evidence demonstrates that parents would like more regular, accurate and specific information on their children's progress in school. Parents like to be treated as partners in their children's education and be kept informed of their children's activities and achievements.

Dale Technology Ltd. offers an educational management system that provides comprehensive information to parents and staff without placing an additional workload on the school staff known as **Dtems.**

What is dtems?

Dtems is a complete school administration system covering all aspects of school activities. Dtems eliminates the need for the schools to have multiple systems. This avoids the duplication of data and saves the school time and money. As Dtems is a fully comprehensive system no extra manpower is required.

Dtems can be accessed in a secure manner by staff and parents providing them with detailed information with the click of a button.

Putting parents in the picture

Dtems offers parents the ability to log into the schools website and securely access information relating to their child. The parental website includes class timetables, academic reports, absenteeism, excursions, sporting events, school calendar and news, awards received, detention etc. thus enabling the parent to be more actively involved in their children's school life. It facilitates a team approach making an effective union of Teacher, Student and Parent.

A Co-operative approach

The sharing of information provides parents with an insight to student life and invites the parents to have an active input in their children's education. This transparent, honest and co-operative approach lends itself to the disciplined, safe environment both parents and educators strive for in schools.
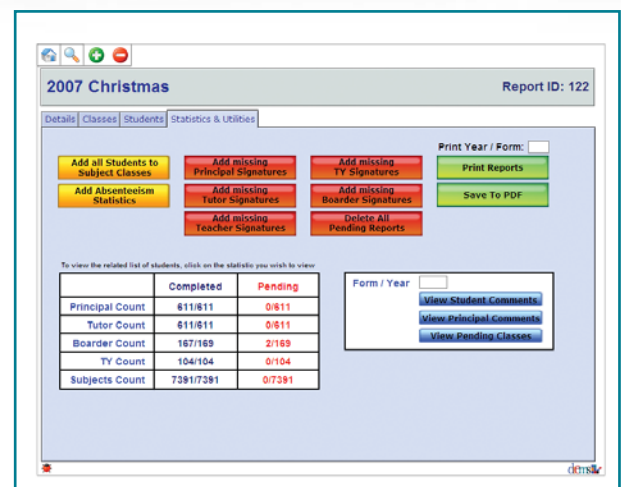

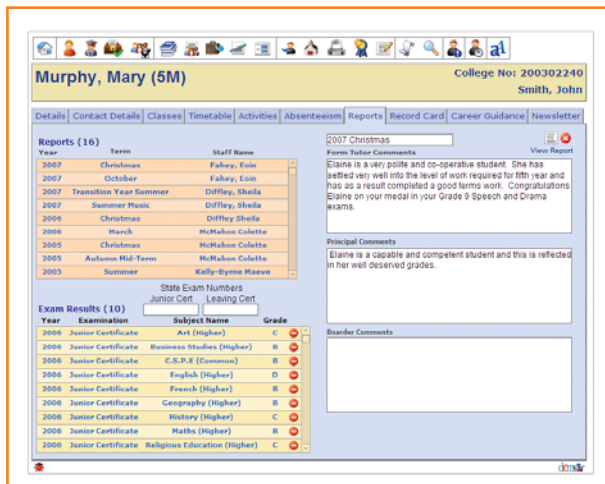

Dtems, in addition to the parental website, automatically generates a personal newsletter to each parent via email. The newsletter informs the parents of the weekly activity for their child including their forthcoming events, excursions, absenteeism and the latest school news. Up to now such detailed weekly updates have not been possible in the traditional school environment.

Teachers

Dtems offers teachers an efficient easy system to view and update student details.

The ability to retrieve information on an individual student at the click of a button is a highly effective management tool given the number of students for which the teacher is responsible.

Teachers find the system particularly beneficial during parent teacher meetings, as they can easily view the students' photo, all previous and present academic reports, absenteeism, excursions etc which gives them a complete picture of the students' progress and circumstances. This makes such meetings more effective, efficient and focused.

"Timetabling and the reporting system are only two of the features of a system that has revolutionised whole-school administration and management......"

Alexandra College Dublin

"Information that would previously have taken us days to extract and collate is now available on demand."

Key benefits

- Removes the need for a paper-bound administrative process

- Parental Website

- Weekly Newsletter

- Keeps all relevant information in one place – Class lists, Student Photographs, Class Records, Timetables etc

- Historic Student Reports

- Timetables can be created or removed at the click of a mouse

- State of the art electronic reports system ensures meaningful school reports without the hassle associated with the traditional paper approach

- Easier management and measurement of absenteeism

- Keeps track of attendance at Excursions and Sporting Events – simplifying the whereabouts of every student during the school/college day

- Ability to send SMS texts to a student's parent/guardian advising them of their son/daughter's absence – keeping truancy under control

- Communication Centre enabling the school to inform parents of upcoming events by SMS/ e-mail

- Admission database to store details of prospective students

- Highlights patterns of behaviour including lateness, detention, missing homework etc

- Allows the parent/guardian to update their contact information via parental website – ensuring the school/college records are always accurate
